# Data Curation

SAYARI GRAPH

Your investigative findings — in context.

It's easier to see the big picture when all your information is in one place. That's why Data Curation in Sayari Graph gives you the ability to complement our market-leading data with your firsthand insights. Create and resolve entities, and add attributes and relationships, whether proprietary or independently sourced. Data curation enables you to centralize your data and unite your team around a single, secure source of truth.

- — **Create** new entities, attributes, and relationships
- — **Upload** new substantiating documents.
- — **Resolve** entities your organization deems the same.
- — **Edit** entity labels and profile details.
- — **View** all your curated entities in one place.

Entity Creation

Create new entities and add records to their profiles while you're exploring networks. Save these curated entities so you and your team can refer back to them later in Graph View or within the entity profile.

SAYARI

Relationship & Attribute Creation

Add new relationships and attributes to both curated and native Sayari entities. Upload substantiating documents and leave a comment on a record for your team. Easily modify new relationships and attributes as additional information becomes available.
Record Name*

Frankenstein's Monster Change of Address

Publication Date

1818-02-21

Source URL

https://villains.fandom.com/wiki/Frankenstein%27s_Monster_(Frankenst

Comments

Monster relocates from Ingolstadt to the Swiss Alps.

Entity Resolution

Combine entities your organization suspects are the same, whether they are curated or native to Sayari. Simply drag and drop to merge or unmerge profiles across the platform.

Label Customization

Employ internal naming conventions that will boost efficiency and comprehension. Change how entities are labeled across the platform to communicate more effectively with your team.
